This workshop was held from 10:00am to 12:00pm. A list of those in attendance is attached. The purpose of this workshop was to discuss the options the Sewer Commission has with the design of the 3A pump station, which is part of the ongoing efforts to connect Exit 11 to sewer. It was discussed on whether to eliminate one pump station and dig deeper to do a gravity fed line. A gravity fed sewer line can be more expensive but requires less maintenance, in the long run, than a pump station. To do a gravity fed line, the line would need to be dug 26 feet down rather than 16 feet if a pump station was going to be used. This workshop was for informative purposes only and no decisions were made.

Respectfully Submitted,

Frank Kotowski
Clerk
